

Azure Cloud Networking & Security – Updated Table of Contents

Module 1: Introduction to Azure Networking

1. Overview of Azure Global Infrastructure
 2. Understanding Azure Regions, Availability Zones, and VNets
 3. Key Networking Components in Azure
 4. Azure Resource Groups and Network Resource Management
-

Module 2: Azure Virtual Networks (VNet)

1. Concepts of Virtual Network and Subnetting
 2. IP Addressing and CIDR in Azure
 3. VNet Peering – Same Region and Global Peering
 4. Service Endpoints vs Private Endpoints
 5. Network Security Groups (NSG) and Application Security Groups (ASG)
-

Module 3: Hybrid Connectivity – Integration with On-Premises

1. Overview of Hybrid Cloud Networking
 2. VPN Gateway and Site-to-Site Connectivity
 3. Point-to-Site VPN for Remote Access
 4. ExpressRoute – Private Connectivity to Azure
 5. BGP Concepts and Routing between On-Prem and Azure
 6. Hands-on: Configuring a Site-to-Site VPN Tunnel
-

Module 4: Hub-and-Spoke Network Architecture

1. Understanding Hub-and-Spoke Design Pattern
 2. Benefits and Use Cases
 3. Deploying the Hub Network – Shared Services, Firewall, and NVA
 4. Connecting Spoke VNets to Hub using Peering
 5. Route Propagation and Control in Hub-and-Spoke
 6. Centralized Security and Monitoring in Hub Network
 7. Hands-on: Building a Hub-and-Spoke Topology in Azure
-

□ Module 5: Azure Virtual WAN

1. Introduction to Azure Virtual WAN
 2. Azure Virtual WAN Integration with the Virtual Network Gateway and Azure Firewall
 3. Route Propagation and Control using Azure Virtual WAN
 4. Differences between Azure Virtual WAN Architecture and a Traditional Hub-and-Spoke Design
 5. Use Cases and Enterprise Scenarios
 6. Hands-on: Deploying Azure Virtual WAN and Connecting Branches
-

Module 6: Azure Load Balancing & Traffic Management

1. Azure Load Balancer (Public & Internal)
 2. Application Gateway and Web Application Firewall (WAF)
 3. Azure Front Door – Global Load Balancing and CDN Integration
 4. Traffic Manager – DNS-Based Load Distribution
 5. Hands-on: Configuring an Application Gateway with WAF
-

Module 7: Network Security in Azure

1. Azure Firewall – Deep Dive
 2. Network Security Groups vs Azure Firewall vs WAF
 3. Just-in-Time (JIT) VM Access
 4. DDoS Protection Plans
 5. Azure Defender for Network Security
 6. Hands-on: Configuring Network Security Policies
-

Module 8: Monitoring, Troubleshooting, and Best Practices

1. Network Watcher – Flow Logs, Topology, and Packet Capture
 2. Diagnostic Settings and Log Analytics
 3. Azure Monitor and Alerts
 4. Troubleshooting VNet Peering and Routing
 5. Security Best Practices for Azure Networks
-
